

Lighting and truss manufacturer, James Thomas Engineering, and lighting designer, Tim Routledge, have collaborated on a new project to create a range of retro-look lighting fixtures with a modern twist. Combining old school aesthetics with a modern output and build quality, the JTE PATT 2013 is the first of this range to be released.

The JTE PATT 2013 is a 750W tungsten softlight housed in a beautifully sleek spun aluminium body which maximises its curves to look as good on stage as the performers it illuminates.

Taking inspiration for its appearance from vintage broadcast lighting, the JTE PATT 2013 is designed around an easily available, reliable modern light source, the 750W HPL lamp.

The JTE PATT 2013 is the first in a new range of modern retro designs from JTE and takes lighting back to what JTE does best, as evidenced from our past history with the creation and production of the Parcan.

- 550mm OD spun parabolic aluminium reflector
- Available in all RAL colours
- Lightweight construction
- Robust James Thomas build quality
- 750W HPL dimmable light source
- Transport dolly available to safely carry four units at a time
